Technical/Engineering Program Manager with 3.5 years of experience at Apple and OLA Electric, delivering hardware and software programs that saved $3M+ in costs, with hands-on technical fluency in Agile program governance, risk management, schedules, and execution. Master's in Engineering Management candidate at Purdue University, seeking full-time Program/Project Manager roles.

EXPERIENCE

Apple **May 2026 - Aug 2026**
Engineering Program Manager Intern **Cupertino, CA**

- Owned 18 of the Pricing Program's 36-project portfolio spanning 10 country storefronts, hitting every regulatory compliance deadline on time and protecting market access for 50M+ users and $1B in associated revenue.
- Ran weekly cross-functional syncs and maintained Kanban dashboards tracking 180+ active work items, identifying and resolving 20+ cross-team blockers and dependencies while briefing Director-level leadership on program health and risk.
- Shipped a real-time status-tracking feature for the Pricing Program's project management tool, consolidating updates across 125 projects for nearly 100 cross-functional users, saving EPMs roughly 3 hours per week previously spent chasing status.
- Introduced a work-breakdown framework, using a custom Claude Code skill, that decomposes specs into a project backlog, cutting spec-to-backlog turnaround from 48 hours to 4 hours and surfacing 25% more trackable work items across 2 pilot projects.

OLA Electric *(India's leading electric two-wheeler manufacturer)* **Jul 2022 - Jun 2025**
Assistant Manager **Bengaluru, India**

EV Charger – Technical Program Manager

- Saved $3M in vendor costs by owning an in-house EV Charger program end-to-end, leading an 8-member hardware, software, and mechanical engineering team from concept to launch in 16 months, less than half the industry-typical 3-year cycle.
- Directed supplier selection and component sourcing across 10 vendors, negotiating costs while coordinating cross-functional teams to deliver 30,000 EV chargers to production, and establishing release governance that cut post-launch defects by 15%.

Anti-lock Braking System (ABS) – Software Project Lead

- Delivered controls software for 22K+ ABS units, reducing the project cycle time by 12% and completing the development 10% under budget by mitigating risks, streamlining workflows across engineering and QA, and optimizing resources.
- Invented and filed a patent application for a deceleration-based wheel-lock detection algorithm that replaced a physical brake switch and dual wheel-speed sensors with a single signal, achieving 99.2% detection accuracy across bench and field testing.

Vehicle OS – Software Developer *(Recognized with Outstanding New Hire Award)*

- Coordinated with product, engineering, QA, and technicians to deliver Vehicle OS 3 features through Simulink modeling, briefed leadership on progress, and drove 88% adoption across 1M+ customers.
- Defined and built a 100+ metric KPI tracking framework (Vector CANoe, JIRA) for the program, turning raw data into insights that resolved 90% of the critical software issues, reduced customer complaints by 30%, and saved $100,000 in support costs.

EDUCATION

Purdue University **West Lafayette, IN**
Master of Engineering Management *(Specialization: Project Management), GPA: 3.86/4.00* **May 2027**

Birla Institute of Technology and Science, Pilani *(Top 10 in India)* **Pilani, India**
Bachelor of Electronics and Instrumentation Engineering **May 2022**

LEADERSHIP

Purdue Data Mine **Jan 2026 - Apr 2026 & Sep 2026 - Present**
Program Manager *(Prev Project Manager)* **West Lafayette, IN**

- Mentor 5 student project managers on core PM fundamentals, from sprint cadence to sponsor communication, while acting as their escalation path for issues outside their authority and briefing Data Mine leadership on portfolio status and health.
- Led a 9-student team through scope definition, sprint execution, and status reporting to corporate sponsors, delivering a working prototype hydrogen-infrastructure decision-support platform projected to impact 20,000+ freight truck trips annually.

SKILLS

- **Program Management:** Agile, Scrum, Program Planning, Risk & Dependency Management, Cross-Functional Leadership, Critical Path Analysis, Stakeholder Management, Resource Planning, Release Governance, Executive Reporting, Vendor Management
- **Technical:** Claude Code, Agentic & Gen AI, Python, SQL, C++, Embedded Systems, APIs, SDLC, EVT, DVT, PVT, High-level Design
- **Tools:** JIRA, Kanban, Primavera P6, MS Project, Confluence, Power BI, Tableau, Simulink, Microsoft Excel/PowerPoint/Word
